SUMMARY

- I am a Python developer with experience in Django and AI/ML learner ML algorithms, and deep learning tools like TensorFlow and OpenCV. I have developed web applications and AI projects such as QR-based gate pass systems, online exams, customer segmentation, and AI-based environmental change detection. Currently pursuing M.Tech in AI/ML, I focus on building practical, intelligent solutions with strong problem-solving and adaptability.

TECHNICAL SKILLS

- **Programming and framework:** Python, Django, JavaScript, HTML, CSS, Bootstrap
- **AI / Machine Learning:** Regression, Classification, K-Means Clustering
- **Deep Learning/CV:** CNN, Image Processing/Classification, Change Detection, OpenCV, Google Earth Engine
- **Tools and Libraries:** NumPy, Pandas, Scikit-learn, TensorFlow, Git, GitHub, Jupyter Notebook, MySQL
- MS Office (Excel, Word, PPT), Problem-Solving, Teamwork, Adaptability

WORK EXPERIENCE

HUMANZO TECHNOLOGIES PVT LTD, DELHI- Python developer intern Nov 2023 - Apr 2024

- Collaborated with senior developers to implement new features and optimize existing code.
- Developed responsive front-end interfaces using HTML, CSS, and Bootstrap.
- Troubleshoot and resolved software defects and issues.
- Demonstrated a proactive approach to learning and adapting to new technologies and methodologies.

PROJECTS/RESEARCH WORK

- **QR CODE E-GATE PASS SYSTEM :** The QR Code E-Gate Pass System streamlines gate pass management using QR-based authentication. Built with PHP, HTML/CSS, and Bootstrap, it includes two main processes: registration, where user details are captured and stored, and verification, where a QR code is scanned to validate and allow secure entry.
- **Blog -Application :** Developed a full-featured blog application using Django with HTML, CSS, and Bootstrap. Implemented secure user authentication, CRUD operations, and key features such as post creation, comments, and search functionality.
- **Environment change detection due to human activities:** Developed an AI model to detect environmental changes using satellite images. Built a CNN-based system with Python, TensorFlow, OpenCV, and Google Earth Engine to identify deforestation, urbanization, and water body shrinkage.
- **Analysis of Blockchain with AI integration for autonomous IOT: :** AI automates decisions, Blockchain secures and verifies data, and IoT provides real-time information. Together, they improve efficiency and security but still face challenges like scalability, cost, and interoperability. The hybrid AI models and optimized blockchain methods give better speed, safety, and fraud prevention
- **How we Enhancing Cloud Security with Blockchain Technology :**Blockchain improves cloud security through decentralization, smart contracts, and AI-driven fraud detection, but still faces issues like low scalability, high energy use, and high costs. Future improvements include Layer-2 scaling, energy-efficient consensus, cross-chain support, and Zero-Knowledge Proofs for better privacy.

EDUCATION

Lovely Professional University, Phagwara and M.Tech In Artificial Intelligence, Machine Learning and	Aug 2024 - Jun 2026 <i>pursuing</i>
Axis Institute Of Technology And Management, Kanpur and Bachelor Electronics and Communications Engineering and	Aug 2019 - Jun 2023 <i>CGPA: 8/10</i>

CERTIFICATES

- **Research Paper Presentation -Analysis of Blockchain with AI Integration for Autonomous IoT** - Chandigarh Engineering College • IETACS 2025
- **Python Basic To Advance** - from Prutor IIT Kanpur • 2022
- **Python full stack Developer Uisng React.js** - from DUCAT the training school, Noida • 2023
